

GSP Technical Limits

10th June 2026

Technical Limits offer interaction with Connections Reform

Technical Limits are limits agreed at each Grid Supply Point (GSP) between National Energy System Operator (NESO) and network companies, enabling the acceleration of embedded generation connections ahead of transmission reinforcement. To date, Technical Limits have enabled connection dates to be brought forward for 7.86GW of projects across Great Britain.

Technical Limits offers were paused by Distribution Network Operators (DNOs) in early 2025 to enable implementation of Connections Reform, known as TMO4+. As we move through implementation of TMO4+, we believe Technical Limits helps to enable earlier connection for ready-to-connect projects and deliver Clean Power 2030 targets.

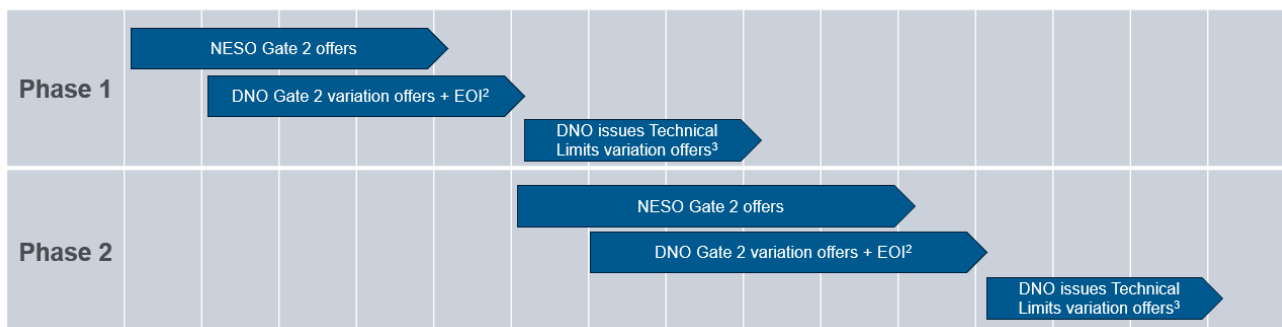

The eligibility for Technical Limits will be reflected by the TMO4+ outcome of the embedded project. Embedded projects that have received a Gate 1 outcome will not be eligible for Technical Limits. Hybrid projects that have received a Gate 1 offer for one technology but a Gate 2 offer for the other technology will only be allowed to accelerate the technology with the Gate 2 offer.

Projects that had previously accepted a Technical Limits offer prior to TMO4+ will receive an updated curtailment estimate aligned to the reformed delivery pipeline following the acceptance of their Gate 2 variation.

Those projects that did not previously receive a Technical Limits offer and will connect at an existing GSP where Technical Limits have already been established will receive an Expression of Interest (EOI) alongside their Gate 2 variation, provided they are eligible for Technical Limits. Once each phase of the Existing Agreements process is complete and all EOI responses have been received, DNOs will undertake network assessment and begin preparing Technical Limits offers, subject to distribution constraints. Eligible projects that express an interest will then be issued a Technical Limits offer along with their estimated curtailment.

Technical Limits Phasing¹

¹ This only refers to Technical Limits offers on GSPs where Technical Limits had already been established ahead of Connections Reform.

² The EOI will only be sent to customers eligible for Technical Limits (i.e., having Site Specific Condition 7 on the Gate 2 App G).

³ Technical Limits offers will be issued by DNOs subject to a distribution connection assessment.
